OCTANORM 

FAST – FLEXIBLE – REUSABLE

The OCTANORM® partitioning wall system consists of vertical upright extrusions and horizontal beam extrusions which are connected with inbuilt tension locks.

A PVC panel (fire safety certificate B1) is inserted into the system groove of the upright and beam extrusion.

Thanks to the modular construction principle, the cabins are quickly built, and can be expanded and converted easily.

Non-standard dimensions and constructions are also possible – call for your personal consultation: **+49 711-770030** or go online to **www.partitioning-walls.com**

YOUR ADVANTAGES

QUICK ASSEMBLY

The easy construction allows for very quick assembly – much quicker than conventional wood constructions.

MODULAR CONSTRUCTION

The modular construction allows flexibility when it comes to conversions and expansions.

REUSABILITY

Aluminium alloys are very sturdy and durable. This makes it possible to reuse our beam and upright extrusions again and again.

MOBILITY

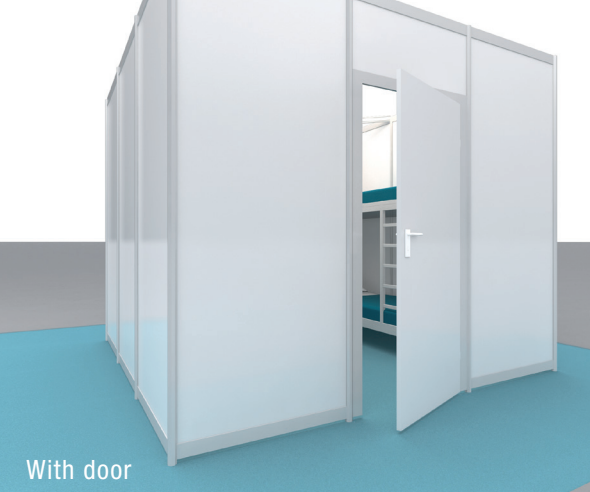

Thanks to the low weight of each component, our partitioning wall systems are easily and economically transportable.

NON-STANDARD DIMENSIONS

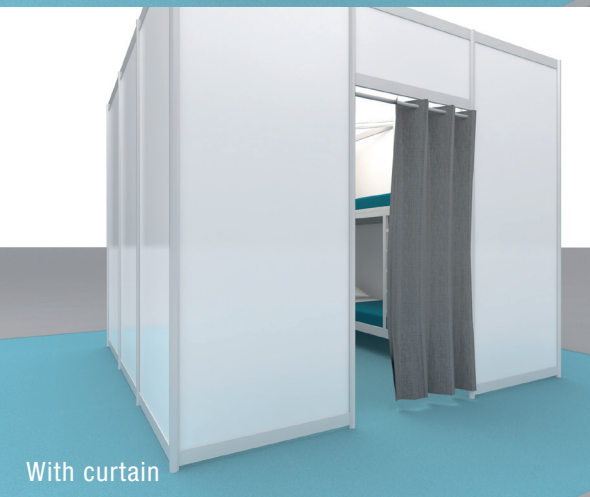

Non-standard dimensions are no problem thanks to our modern production machinery, and are easily manufactured.

LARGE SUPPLY

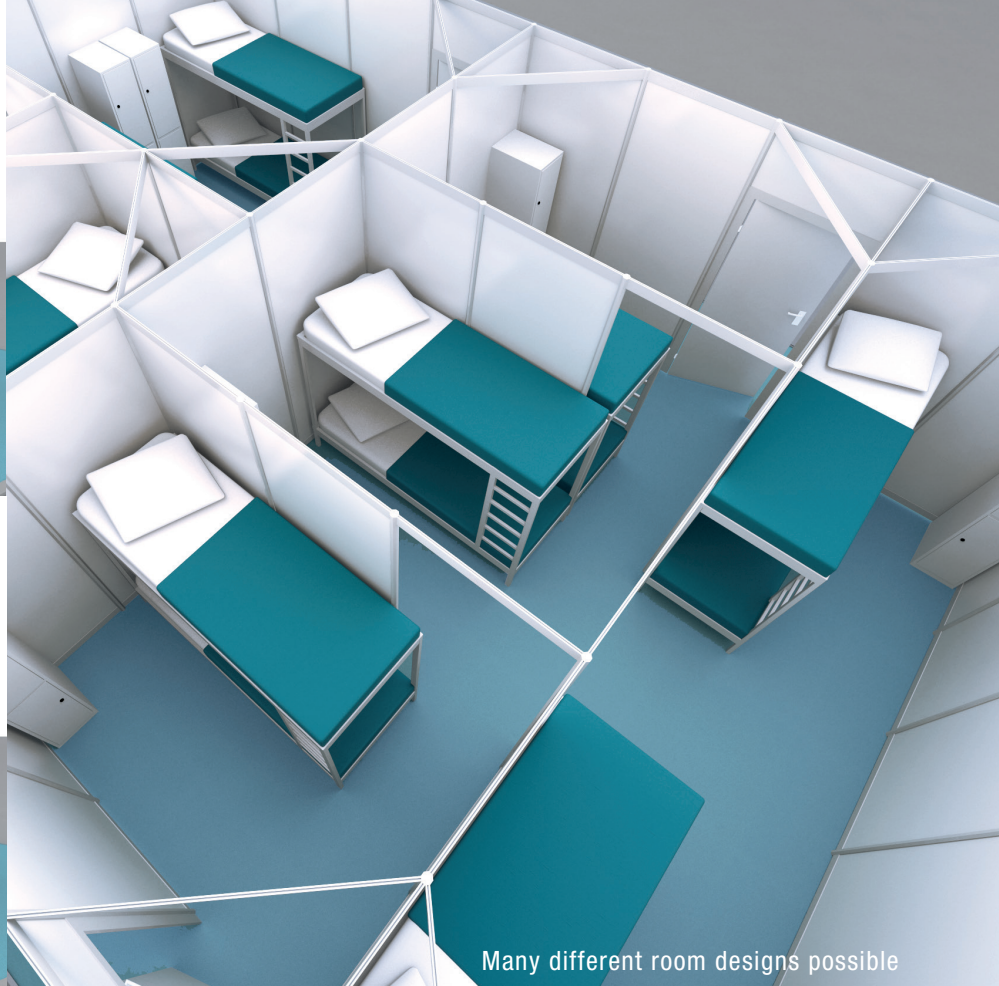

Our partitioning wall system components are an OCTANORM stock article, making them available in high quantities on short notice.

With door

With curtain

Many different room designs possible

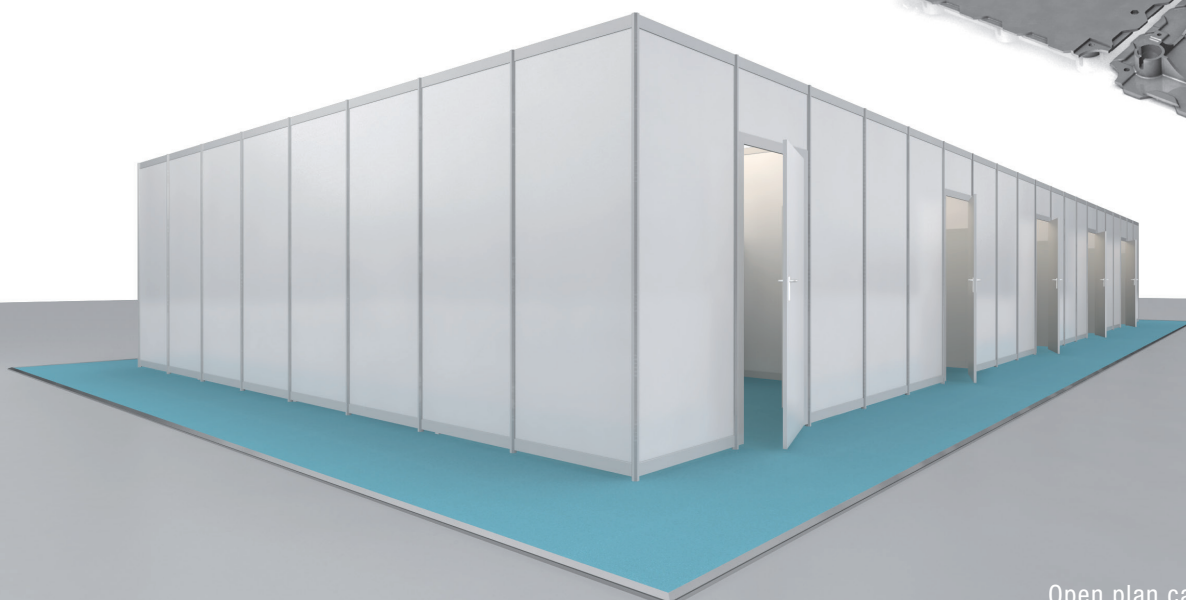

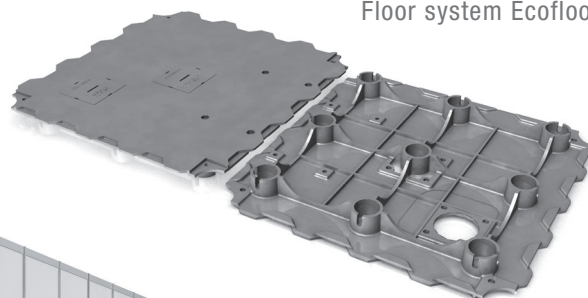

DETAILS/SPECIFICATIONS

- Standard axial dimensions: 990 x 2500 mm
- Material: aluminium, matt anodised, silver
- Panel material: PVC or chipboard
- With doors or curtains
- Extensive accessories (e.g. lighting)
- Development and assembly

FLOOR SYSTEM ECOFLOOR

- B1 certified (low-flammable)
- Suitable for indoors and outdoors
- High durability and low height
- Reusable
- Fast assembly with or without flooring

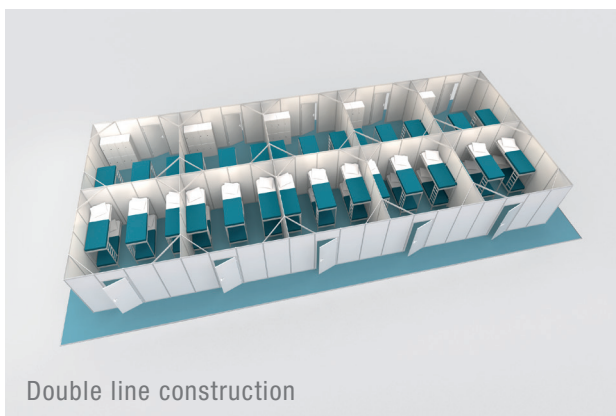

Floor system Ecofloor

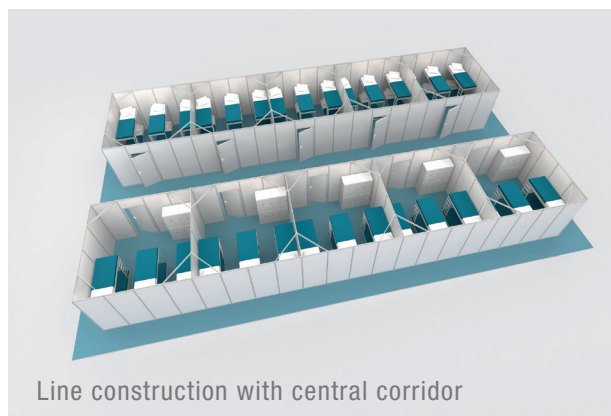

Open plan cabins in line construction

Mobile partitioning wall systems for emergency shelters
